

BIO-BASED PENCILS

Pure nature!

Bio-based pencils made from recycled wood fibres

We made it: With our protected ‚Pure Nature Pen‘ made from renewable raw materials, we have developed a bio-based pen that combines the following advantages:

- Elegant natural look & feel (comparable to wooden pencils)
- Optics and color matching with lacquer or hot stamping foil
- Shape and color can be freely selected; even a trendy 3D look can be realized
- Sufficient barrier effect for care and cosmetic products (e.g. eye and lip liners)
- Pencils/sleeves can be easily sharpened if required
- No raw material capacity bottlenecks (unlike cedar wood)
- Environmentally friendly and sustainable: short transport routes for wood fibers from the region
- Price comparable with plastic pencils
- Fully bio-based: including front and end cap

Bio-based sleeve with matt or shiny surface

Slim = 90 - 200 mm / ID = 4.15 / AD = 7.2 mm

Jumbo = 90 - 105 mm / ID = 7.2 / AD = 11.7 mm

The complete casing of the pencils as well as the raw material can be colored with bio-based colors (e.g. ester-based and vegetable oils etc.).

If desired, we can take over the complete production process: From the production of the pens to the filling also with NATRUE and VEGAN formulations and the decoration - the entire ‚Pure Nature Pen‘ from one source

BIO-BASED PENCILS

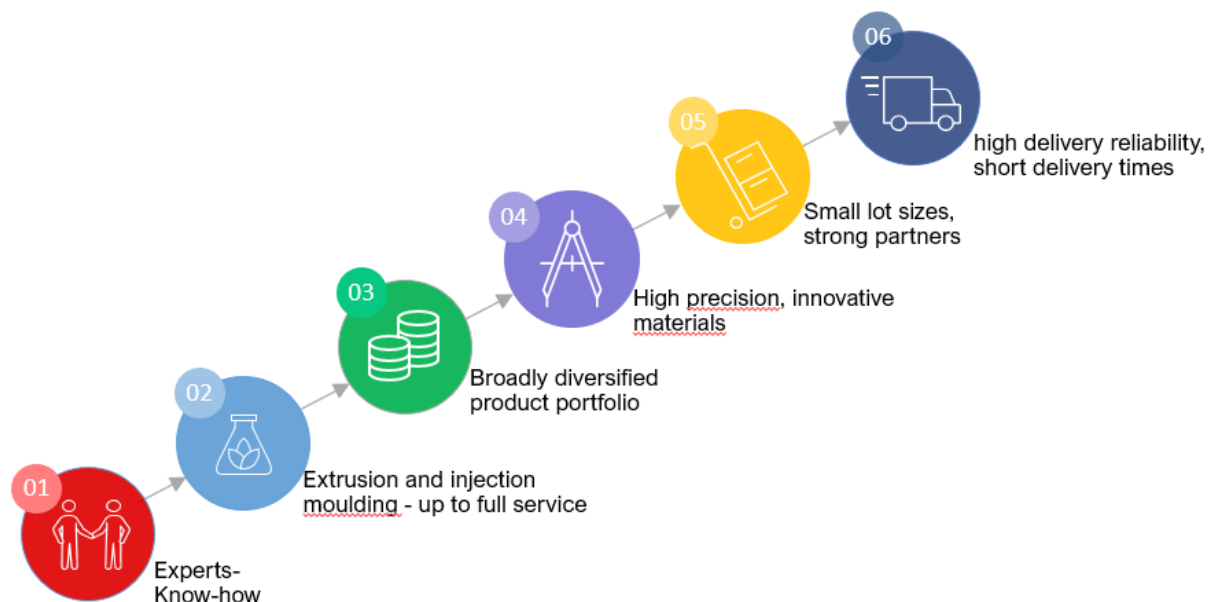

Sustainable and future-oriented

Our biogenic input materials consist of extrudable and sharpenable cellulose granules. Solvents are banned from the production process.

Our new generation of thermoplastic compounds, with up to 95% bio-based materials, helps us to conserve the limited fossil resources of this earth.

We use selected formulations with a wide range of bio-polymers such as cellulose, lignin, natural resins, natural waxes, corn oils, biological additives and natural reinforcing fibers.

We stand for product and service guarantee!
